

## Boston Mountains (Ecoregion 38)

Ecoregion 38 is mountainous, forested and underlain by Pennsylvanian sandstone, shale and siltstone. It is one of the Ozark Plateaus; some folding and faulting has occurred but, in general, strata are much less deformed than in the Ouachita Mountains (36). Maximum elevations are higher, soils have a warmer temperature regime and carbonate rocks are much less extensive than in the Ozark Highlands (39). Physiography is distinct from the Arkansas Valley (37).

Upland soils are mostly Ultisols that developed under oak–hickory and oak–hickory–pine forests. Today, forests are still widespread; northern red oak, southern red oak, white oak and hickories usually dominate the uplands, but shortleaf pine grows on drier, south- and west-facing slopes underlain by sandstone.

**Figure 3.7.** Boston Mountains ecoregion.

*Upper Boston Mountains*

Pastureland or hayland occur on nearly level ridgetops, benches and valley floors. Population density is low; recreation, logging and livestock farming are the primary land uses.

Water quality in streams is generally exceptional; biochemical, nutrient and mineral water quality parameter concentrations all tend to be very low. Fish communities are mostly composed of sensitive species; a diverse, often darter-dominated community occurs along with nearly equal proportions of minnows and sunfishes. During low flows, streams in both Ecoregions 38 and 36 usually run clear but, during high flow conditions, turbidity in Ecoregion 38 tends to be greater than in Ecoregion 36. Summer flow in many small streams is limited or nonexistent but isolated, enduring pools may occur.

## Upper Boston Mountains

38a. The Upper Boston Mountains ecoregion is generally higher and more moist than the Lower Boston Mountains (38b); elevations vary from 1,900 to 2,800 feet. Potential natural vegetation is oak-hickory forest. Characteristically, the forests of the Upper Boston Mountains (38a) are more closed and contain far less pine than those of the Lower Boston Mountains (38b). North-facing slopes support mesic forests. Ecoregion 38a is underlain by Pennsylvanian sandstone, shale and siltstone that contrasts with the limestone and dolomite that dominates Ozark Highlands (39).

Water quality in streams reflects geology, soils and land use and is typically exceptional; mineral, nutrient and solid concentrations as well as turbidity all tend to be very low. During the summer, many streams do not flow.

## Lower Boston Mountains

38b. The Lower Boston Mountains ecoregion is a mosaic of woodland, forest and savanna that contrasts with the denser, more moist and closed forests of the Upper Boston Mountains (38a). Potential natural vegetation is oak–hickory– pine and oak–hickory forests; pine is much more common than in Ecoregions 38a or 39. Shortleaf pine is especially widespread on drier, south- and west-facing slopes underlain by sandstone. Both precipitation and forest density decrease toward the west, where oak–pine woodland or savanna become common.

Ecoregion 38b is underlain by Pennsylvanian sandstone, shale and siltstone; it is lithologically distinct from the limestone- and dolomite-dominated Ozark High- lands (39).

Overall, water quality is quite similar to Ecoregion 38a, which, although generally higher, has similar lithology and land uses (adapted from Woods and others 2004).

## Boston Mountain Ecoregion:

### Species of Greatest Conservation Need (SGCN)

Species of greatest conservation need (SGCN) in the Boston Mountains are presented by taxa association (Table 3.7). A higher priority score indicates a greater need for actions to conserve the species. Calculation of the priority score is discussed in Section 2, pages 7-15. A ranked list of all SGCN associated with the ecoregion is presented in Table 3.8.

**Table 3.7.** SGCN by taxa association in the Boston Mountains.

| Taxa Association | Common Name                | Scientific Name                    | Priority Score |
|------------------|----------------------------|------------------------------------|----------------|
| Amphibian        | Crawfish Frog              | <i>Lithobates areolatus</i>        | 23             |
|                  | Ringed Salamander          | <i>Ambystoma annulatum</i>         | 19             |
|                  | Four-toed Salamander       | <i>Hemidactylum scutatum</i>       | 19             |
|                  | Hurter's Spadefoot         | <i>Scaphiopus hurterii</i>         | 19             |
|                  | Wood Frog                  | <i>Lithobates sylvaticus</i>       | 15             |
| Bird             | Piping Plover              | <i>Charadrius melanotos</i>        | 43             |
|                  | Henslow's Sparrow          | <i>Ammodramus henslowii</i>        | 33             |
|                  | Bachman's Sparrow          | <i>Peucaea aestivalis</i>          | 33             |
|                  | Rusty Blackbird            | <i>Euphagus carolinus</i>          | 29             |
|                  | Bewick's Wren              | <i>Thryomanes bewickii</i>         | 29             |
|                  | Common Nighthawk           | <i>Chordeiles minor</i>            | 24             |
|                  | Migrant Loggerhead Shrike  | <i>Lanius ludovicianus migrans</i> | 24             |
|                  | Yellow-crowned Night-Heron | <i>Nyctanassa violacea</i>         | 24             |
|                  | American Woodcock          | <i>Scolopax minor</i>              | 24             |
|                  | Cerulean Warbler           | <i>Setophaga cerulea</i>           | 24             |

**Table 3.8.** Species of greatest conservation need (SGCN) in the Boston Mountains ranked by priority score. A higher priority score indicates a greater need for actions to conserve the species. Of the 377 SGCN, 154 occur in this ecoregion.

| Priority Score | Common Name                    | Scientific Name                       | Taxa Association     |
|----------------|--------------------------------|---------------------------------------|----------------------|
| 100            | Yellowcheek Darter             | <i>Etheostoma moorei</i>              | Fish                 |
| 80             | Bowed Snowfly                  | <i>Allocapnia oribata</i>             | Insect               |
| 80             | Ozark Big-eared Bat            | <i>Corynorhinus townsendii ingens</i> | Mammal               |

## Habitats that occur in the Boston Mountains

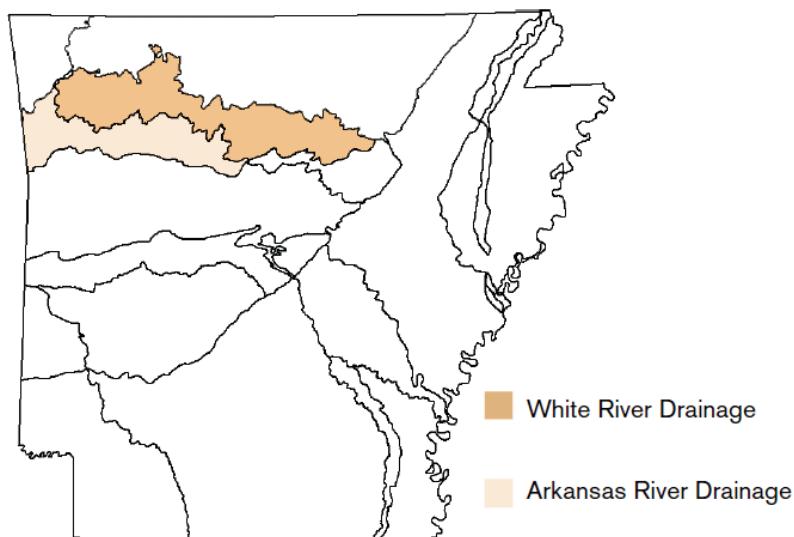

Of the 37 terrestrial habitats in Arkansas, 19 occur in the Boston Mountains ecoregion (Table 3.9). Of 18 ecobasins in Arkansas, two occur in the Boston Mountains (Figure 3.8). These associations are described in the Section 4. Terrestrial Habitats, pages 1188-1575 and Section 5. Aquatic Habitats, pages 1576-1612.

**Table 3.9.** Terrestrial Habitats in the Boston Mountains

### **Habitat Name**

- Caves, Mines, Sinkholes, and other Karst Habitat
- Crop Land
- Cultivated Forest
- Herbaceous Wetland
- Interior Highlands Calcareous Glade and Barrens
- Interior Highlands Dry Acidic Glade and Barrens
- Mud Flats
- Ozark-Ouachita Cliff and Talus
- Ozark-Ouachita Dry Oak and Pine Woodland
- Ozark-Ouachita Dry-Mesic Oak Forest
- Ozark-Ouachita Forested Seep
- Ozark-Ouachita Large Floodplain
- Ozark-Ouachita Mesic Hardwood Forest
- Ozark-Ouachita Pine/Bluestem Woodland
- Ozark-Ouachita Pine-Oak Forest/ Woodland
- Ozark-Ouachita Riparian
- Pasture Land
- Ponds, Lakes, and Water Holes
- Urban/Suburban

**Figure 3.8.** Ecobasin distribution in the Boston Mountains.

## Problems faced by Species of Greatest Conservation Need (SGCN)

Taxa association teams listed problems faced by SGCN individually in the Species Reports, pages 45-1082. A summary of the problems faced by SGCN in the Boston Mountains is presented below. Each problem has a score which is a sum of all Species Priority Scores associated with species for which this problem was assigned. A higher score implies a higher quantity of SGCN and/or more greatly imperiled species associated with problems listed here.

**Table 3.10.** Problems faced by SGCN.

| Problem faced                     | Score |
|-----------------------------------|-------|
| Urban development                 | 2094  |
| Forestry activities               | 1838  |
| Grazing/Browsing                  | 1741  |
| Resource extraction               | 1682  |
| Dam                               | 1490  |
| Agricultural practices            | 1482  |
| Road construction                 | 852   |
| Confined animal operations        | 633   |
| Municipal/Industrial point source | 570   |

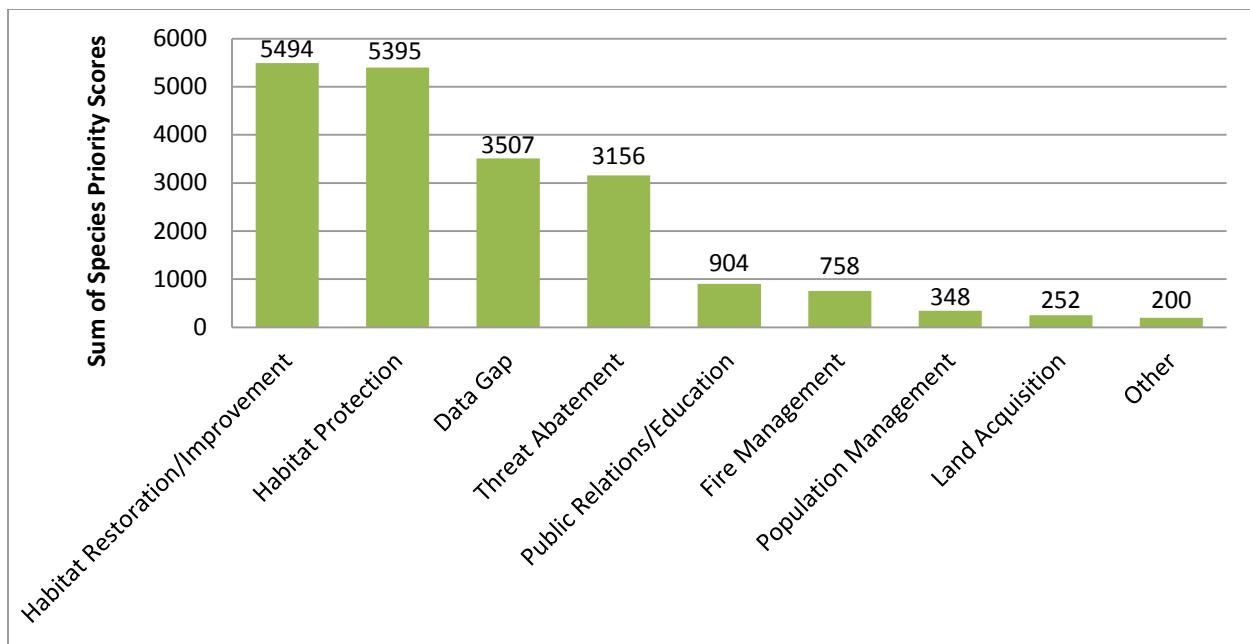

|  |     |
|--|-----|
| Fire suppression                               | 452 |
| Parasites/pathogens                            | 392 |
| Recreation                                     | 375 |
| Channel alteration                             | 343 |
| Conversion of riparian forest                  | 333 |
| Water diversion                                | 312 |
| Channel maintenance                            | 302 |
| Commercial/Industrial development              | 294 |
| Exotic species                                 | 241 |
| Non-point source pollution                     | 131 |
| Excessive groundwater withdrawal               | 121 |
| Predation                                      | 97  |
| Management of/for certain species              | 46  |
| Interspecific competition                      | 29  |
| Excessive non-commercial harvest or collection | 27  |
| Commercial harvest                             | 24  |

## Conservation actions needed in the Boston Mountains

Descriptions of conservation actions linked to individual species on the list of SGCN are presented in the Species Reports, pages 45-1082. Below are categories of conservation actions recommended by the taxa association teams (Figure 3.9).

The score associated with the conservation action category is the sum of all priority scores associated with species for which a conservation action has been assigned, weighted by the importance of the conservation action category to the species. A higher score implies a higher quantity of SGCN and/or more greatly imperiled species would be affected by actions within this conservation action category.

These scores may be used as guides to directing the apportionment of funding toward conservation actions benefiting habitats and species of greatest conservation need.

**Figure 3.9.** Conservation action categories recommended for the Boston Mountains.
